

Stance - Control Knee Joint™

Technology that offers an opportunity

“The best thing about the Horton SCOKJ is that it works in a way that no one ever anticipated. My incomplete spinal cord injury patient was able to regain strength. This brace took a 23 year old and gave him his world back. After one and a half years in the SCOKJ, my patient doesn't need the brace anymore. He is now in a rigid AFO and is as happy as he can be. The benefits far outweigh the bulkiness.”

Alan Moore, BA, CO (c)
Orthopedic Bracing Solutions
Kitchener, Ontario

“My 51- year - old patient with polio had been in a locked KAFO since the age of nine. When I fit her with the Horton SCOKJ, she burst into tears. Since she has gotten her Horton brace her life has changed completely. After six months in the brace, she promptly ordered another one, just so she could have a spare.”

Simon Slawner, CPO, (A), (c)

Bilateral SCOKJs®

“The Horton Stance Control Knee Joint is the most exciting technology to come to the orthotic field in years. It has given the polio and spinal cord injury communities the ability to walk with bent knees. Here are some comments from some of my patients.

- It gives me better endurance
 - I can walk more natural
 - I am a safer walker on uneven ground
 - It has improved the quality of my life and I can be more active
- I think the last one sums it up the best.”

William Hineman, CP
Hanger
Bismark, North Dakota

“The Horton Stance Control Knee has been an answer that has been missing for many years for weak quadriceps. Patients develop a sense of confidence when walking that frees them from walking aids in many instances.”

Steven Foy, CPO
Northern Orthopedics
Anchorage, Alaska

“I look at this technology as where cell phones started out years ago when they were big and bulky and were carried around with their own bags. Now they are mini mobile computers that can do multitudes more and fit in the palm of the hand. There is an old saying that ‘ability is of little concern without opportunity’. Most patients that I have worked with view this technology as the opportunity to do something that they never before had been able to do, regardless of the bulk. The proof comes when the patient comes in for follow up using the Horton KAFO as opposed to carrying it in. One of my patients expressed it best to me when I proposed he wear his old locked KAFO for a week while I made an adjustment. You would of thought I took a cell phone away from a teenager.”

Keith Smith, CO, LO
The Orthotic and Prosthetic Lab
St. Louis, Missouri

“Safety first and the Horton joint offers that. The SCOKJ is simple enough for my patients to understand.”

Frank Hayday, CPO (c)
Karl Hager Limb and Brace
Edmonton, Alberta

“The stability and safety this technology provides to my patients is invaluable to their lives.”
